Sugino (US 2004/0201564) teaches a liquid crystal display comprising a write-gray scale level determining section for determining write-gray scale level data for input image data that compensates an optical response characteristic of the liquid crystal display, in accordance with, at least a combination of gray scale level transitions from a previous vertical display period to a current vertical display period and a temperature detected by a temperature detector included in the liquid crystal display.

Suzuki (US 2002/0140652) teaches a liquid crystal display comprising a write-gray scale level determining section for determining write gray-scale level data that compensates an optical response characteristic of the liquid crystal display, in accordance with a temperature detected by a temperature detector included in the liquid crystal display and a gray scale level transition from a previous vertical display period to a current vertical display period.

None of the prior art of record teaches a liquid crystal display comprising a write-gray scale level determining section which has a plurality of write-gray scale level table memories for a plurality of interior temperatures and generates achievable gray scale level data in accordance with gray scale level transitions from a previous vertical display period to a current vertical display period and the parameters included in the table memories, and an achievable gray scale level determining section which has a plurality of achievable-gray scale level table memories for a plurality of interior temperatures and generates achievable gray scale level data in accordance with a combination of gray scale level transition from one vertical display period to the next and the achievable gray scale level parameters included in the table memories.
